I'm a web developer from Bogotá Colombia. I'm 31 years old and I've been making websites and web applications for about 9 years.

I consider myself a hacker, I'm always using technology to solve my life's problems and ambitions.

I use HTML, CSS and JavaScript. Though constantly changing, my focus right now is React.js, Styled-Components, Node and Typescript.

Professional Experience

Media.Monks • A digital production company

[website](#)

Principal FrontEnd Developer October 2021 - Present Remote

Javascript Developer January 2018 - December 2018 Buenos Aires, Argentina

- Developed Single page applications, websites and tailor-made content management systems for several clients

Global Games SA

Web Developer december 2013 - June 2014  Bogotá, Colombia

JQuery·PHP·MySQL

- Developed PHP functions for reports generation
- Developed JQuery function for reports rendering and interaction

Technologies and Languages

I code with Javascript for both the FrontEnd and BackEnd

My favorite FrontEnd stack changes all the time, currently is Typescript and React for component layout and logic, styled-components for styling and GraphQL for BackEnd communication, but I also believe the best stack is whatever fits the project.

I'm not so active right now in Backend Development, when I am I usually use express, or a serverless platform like firebase.

For styling I'm currently in love with styled-components, I also have been working lately with Sass and making crazy animations with green sock.

When working with databases I usually choose MySQL in conjunction with GraphQL, I've been pretty happy working with apollo for FE GraphQL querying.

Education

Servicio Nacional De Aprendizaje SENA

Technologist In Software Applications and Systems Development February 2012 - November 2014

Interests

When I'm not coding some personal project I'm playing board games and painting miniatures, I also play the drums and make funky electronic music
